Fernando Ramírez García

Software Engineer Intern Candidate

dferramm@gmail.com · github.com/dferram · linkedin.com/in/ferram-garcia · Querétaro, México (Open to Remote)

PROFESSIONAL SUMMARY

Software Engineering student at UAQ with 1,216+ GitHub contributions in 2026 and a 79-day unbroken commit streak. I ship production software: RazoConnect, a full-stack ERP I architected and delivered solo for a wholesale client. I lead 9 active projects simultaneously while teaching Git/GitHub workshops at my faculty. Former high-performance basketball player (ABE league) — I bring the same discipline, coachability, and drive to every engineering challenge.

KEY PROJECTS

Sole Architect & Full-Stack Developer · RazoConnect — Production SaaS B2B

Oct 2025 – Present | Remote

- Architected a multi-tenant SaaS platform where each tenant runs on its own domain with fully isolated data, branding, and config on shared infrastructure — built and shipped solo.
- Implemented 4-layer tenant isolation: domain detection, cross-validated JWT, active session destruction on mismatch, and tenant_id filtering on every DB query.
- Engineered all security from scratch following OWASP Top 10 — CSP, HSTS, distributed rate limiting, and input sanitization with zero third-party security packages.
- Designed a self-validating PostgreSQL schema: 20+ PL/pgSQL functions, 10+ triggers enforcing ACID at DB level, and a credit scoring engine for risk analysis before admin approval.

Creator & Developer · Apex-Finance

Feb 2026 – Present | Personal Project

- Budget and expense tracking system built with TypeScript and React; implements double-entry logic and visual dashboards for multi-category financial control.

Co-Creator & Mobile Developer · DevPal

Jan 2026 | Hackathon Project

- Mobile app centralizing the developer experience: tech event discovery on an interactive map, AI-generated daily coding challenges with real-time code execution, and AI-powered code review — gamified with XP, badges, and a global leaderboard.

TEACHING & LEADERSHIP

Technical Workshop Instructor · UAQ Faculty of Engineering

2026 – Present | Querétaro, México

- Designed and delivered "Git/GitHub desde cero" for 30+ engineering students — Gitflow, Conventional Commits, conflict resolution, and collaborative workflows.
- Recognized as the go-to technical reference for version control in my cohort.

TECHNICAL SKILLS

Backend	Python · Node.js · JavaScript · TypeScript · FastAPI · REST APIs
Frontend	React · HTML5 · CSS3 · Figma
Databases	PostgreSQL · MongoDB
Cloud/DevOps	Azure · Docker · CI/CD
Tools	Git · GitHub · Conventional Commits · Gitflow

EDUCATION

B.Eng. in Software Engineering · Universidad Autónoma de Querétaro (UAQ)

2022 – Present | *Querétaro, México*
