Diego Fernando Ramírez García

Full-Stack Software Engineer

dferramm@gmail.com github.com/dferram linkedin.com/in/ferram-garcia Querétaro, México

PROFESSIONAL SUMMARY

Software Engineering student at UAQ who genuinely enjoys building things that solve real problems. I'm drawn to the idea of being part of a team where my work has a tangible impact — contributing to a product, learning from experienced engineers, and growing alongside the company. I pick up new technologies quickly and am comfortable working through unfamiliar challenges independently, though I value collaboration and feedback just as much. Consistency matters to me: I try to show up and make progress every day, which is reflected in my GitHub activity. Most of what I know has come from building real projects, including RazoConnect, a active B2B ERP and E-commerce SaaS I architected and shipped as a solo developer.

TECHNICAL SKILLS

Backend	Node.js · TypeScript · JavaScript · Python · FastAPI · REST APIs · Express
Frontend	React · HTML5 · CSS3 · Figma
Databases	PostgreSQL · MongoDB
Cloud/DevOps	Azure App Service · Docker · CI/CD Pipelines
Security	OWASP Top 10 · CSP · HSTS · JWT · Rate Limiting · Row-Level Security
Tools	Git · GitHub

PROJECTS & EXPERIENCE

Sole Architect & Full-Stack Developer · RazoConnect — Production B2B SaaS ERP *Oct 2025 – Present*

Multi-tenant wholesale management platform · Active deployment on Azure App Service

[Node.js] [TypeScript] [PostgreSQL] [Azure] [Docker] [React] [MercadoPago]

- **4-layer tenant isolation:** hostname detection → cross-validated JWT → active session destruction on mismatch → tenant_id filtering on every DB query.
- **Custom OWASP Top 10 security from scratch:** CSP, HSTS, X-Frame-Options, distributed rate limiting, and input sanitization — zero third-party security packages.
- **Self-validating PostgreSQL schema:** 70+ tables, 20+ PL/pgSQL functions and 10+ triggers enforcing ACID compliance at DB level.
- **Credit risk scoring engine:** evaluates client tenure, purchase frequency, historical max ticket, and overdue payments to generate automated LOW/MEDIUM/HIGH recommendations.
- **Immutable forensic audit trail:** append-only Kardex (SELECT FOR UPDATE + atomic transactions) and JSONB diff-tracking — neither table permits UPDATE or DELETE.
- **FIFO + Priority Override inventory algorithm:** VIP orders preempt queue with cascade notifications. Smart Reordering normalizes quantities to supplier packaging via ceil(qty/pack)×pack.
- **Enterprise RBAC:** 7 roles mapped to real business functions (CEO, CFO, Director Ops, VP Sales, Agent, Warehouse) with granular module-level permission matrix.
- **End-to-end automation:** daily debt aging, automatic client suspension after 15-day overdue window, low-stock alerts, and backorder-triggered purchase order generation.

Creator & Developer · **Apex-Finance** *Feb 2026 – Present*
Personal project — Budget & expense tracking
[TypeScript] [React] [PostgreSQL]

- Implemented double-entry accounting logic with real-time dashboards for multi-category financial control and visual spending breakdowns.

Co-Creator & Mobile Developer · **DevPal** *Jan 2026*
Google Gemini Hackathon
[Google Gemini API] [Mobile] [Real-time Code Execution]

- Built developer-experience app: interactive event map, AI-generated coding challenges with live execution, AI code review, and a gamified XP + leaderboard system.

COMPETITIONS & HACKATHONS

Google Gemini Hackathon — DevPal *2026*
NASA Space Apps Challenge *2025*
Major League Hacking (MLH) *2025 & 2026*

EDUCATION

B.Eng. in Software Engineering · **Universidad Autónoma de Querétaro (UAQ)** *2022 – Present*
6th Semester · Querétaro, México
