

Diego Fernando Ramírez García

Full-Stack Software Engineer · Data Analyst

dferramm@gmail.com · github.com/dferram · linkedin.com/in/ferram-garcia · Querétaro, México · 55 6098 9524

PROFESSIONAL PROFILE

Self-taught software developer with a steady, problem-solving mindset and a comfort with working under pressure. I care about delivering solid, well-considered results, and I enjoy the collaborative side of building things — figuring out problems as a team and keeping communication honest along the way. I'm also drawn to teaching: I led a Git and GitHub course at Universidad Autónoma de Querétaro to help classmates build a solid foundation in version control.

EXPERIENCE & PROJECTS

Software Engineering Intern — Procurement Data Analytics — Colgate-Palmolive

JavaScript · Google Apps Script · Google Sheets API · Power BI · Serverless

- Architected a serverless Procurement PMO platform using Google Apps Script and the Sheets API as a data layer, enabling centralized tracking of financial portfolios (FTG) across the organization.
- Delivered real-time KPI dashboards integrated with Power BI, giving executives clearer visibility into procurement performance and project financial status.
- Automated cross-departmental workflows — status updates, approval routing, reporting pipelines — reducing manual overhead and improving data consistency across teams.
- Built a Supplier Capability Dashboard on Google Workspace (Sheets, Forms, Apps Script) to centralize supplier evaluations and automate technical scoring for procurement decisions.

Sole Architect & Full-Stack Developer — RazoConnect

B2B Multi-Tenant SaaS ERP · Production · Azure App Service

Node.js · JavaScript · HTML · CSS · PostgreSQL · Azure · Docker · MercadoPago API

- Built a 4-layer tenant isolation flow: hostname detection → cross-validated JWT → active session destruction on mismatch → tenant_id filtering on every query.
- Built the security stack from scratch: X-Frame-Options, distributed rate limiting, input sanitization — no third-party security packages.
- Designed a self-validating PostgreSQL schema: 70+ tables, 20+ PL/pgSQL functions, and 10+ triggers enforcing ACID compliance at the database level.
- Built a credit risk scoring engine producing automated LOW/MEDIUM/HIGH recommendations based on customer seniority, purchase frequency, ticket history, and overdue payments.
- Implemented an immutable, insert-only audit trail (Kardex) using SELECT FOR UPDATE with atomic transactions and JSONB diff-tracking — no table permits UPDATE or DELETE.
- Set up enterprise RBAC with 7 roles and a module-level permission matrix, plus end-to-end automation for daily debt aging, customer suspension, and backorder PO generation.

Creator & Developer — Apex-Finance

Personal Project · Cloud-Native Personal Finance Platform

React · TypeScript · PostgreSQL · Azure · AI Integration

- Designed a cloud-native personal finance platform with double-entry accounting logic, deployed on Azure with an AWS-compatible architecture for scalability and resilience.
- Integrated AI-powered expense analysis for actionable financial insights, along with real-time dashboards for multi-category tracking and visual spending breakdowns.

Full-Stack Developer — FuzzyDx

Academic Project · Respiratory Disease Diagnostic System · UAQ

React · TypeScript · Python · FastAPI · MongoDB · Azure · Docker

- Built a fuzzy-logic medical diagnostic system that evaluates symptom-to-disease match degrees using fuzzy set intersection (min operator) as the inference engine.
- Modeled a 10×15 fuzzy matrix (10 diseases × 15 clinical symptoms) stored in MongoDB, with membership values in [0.0, 1.0] encoding clinical correlation strength.

- Designed a 3-stage pipeline: pre-loaded knowledge base → general diagnosis (fuzzification + ranking) → specific diagnosis (match %, key symptom attribution, recommendations).
- Deployed on Azure App Service with Docker Compose; REST API auto-documented via Swagger UI.

Freelance Full-Stack Developer — Honatu

Client Project · Digital Platform for a Residential Hydroponics Company · Querétaro

HTML5 · CSS3 · JavaScript · Vite · Node.js · PostgreSQL

- Designed and built the full digital presence for a local hydroponics business: product catalog, service pages, and customer contact flows.
- Architected a Node.js + PostgreSQL backend for product, client, and order management, structured for a phased rollout alongside a production-ready Vite frontend.

EDUCATION

B.Eng. Software Engineering — 7th Semester, 2022 – Present — Universidad Autónoma de Querétaro (UAQ)

Instructor, Git & GitHub Workshop — an introductory version control course delivered to peers at the Computer Science Faculty.

TECHNICAL SKILLS

Backend: Node.js · JavaScript · Python

Frontend: React · TypeScript · HTML5 · CSS3 · Figma

Data: Pandas · Power BI · Google Colab

Databases: PostgreSQL · MongoDB · Google Sheets API

Cloud / DevOps: Azure · Google Cloud · Docker · Serverless

Security: JWT · Rate Limiting · Row-Level Security (RLS)

Tools: Git · GitHub

Languages: Spanish (Native) · English (C1)

CERTIFICATIONS

- AWS Foundations — Amazon Web Services
- Develop Solutions for Microsoft Azure — Microsoft
- Data Integration at Scale (Azure Data Factory / Synapse) — Microsoft
- Create Machine Learning Models — Microsoft
- GitHub Foundations — Microsoft
- Google Cloud Professional Data Engineer — Google Cloud (In Progress)
- AWS Cloud Developer — Amazon Web Services (In Progress)
