

Diego Fernando Ramírez García

Full-Stack Software Engineer

dferramm@gmail.com · github.com/dferram · linkedin.com/in/ferram-garcia · Querétaro, México

PROFESSIONAL SUMMARY

Software Engineering student at UAQ who genuinely enjoys building things that solve real problems. I'm drawn to the idea of being part of a team where my work has a tangible impact — contributing to a product, learning from experienced engineers, and growing alongside the company. I pick up new technologies quickly and am comfortable working through unfamiliar challenges independently, though I value collaboration and feedback just as much. Consistency matters to me: I try to show up and make progress every day. Most of what I know has come from building real projects, including RazoConnect, an active B2B ERP and E-commerce SaaS I architected and shipped as a solo developer.

TECHNICAL SKILLS

Backend	Node.js · TypeScript · JavaScript · Python · FastAPI · REST APIs · Express
Frontend	React · HTML5 · CSS3 · Figma
Databases	PostgreSQL · MongoDB
Cloud/DevOps	Azure App Service · Docker
Security	JWT · Rate Limiting · Row-Level Security
Tools	Git · GitHub

PROJECTS & EXPERIENCE

Sole Architect & Full-Stack Developer · **RazoConnect** — Production B2B SaaS ERP Oct 2025 – Present

Multi-tenant wholesale management platform · Active deployment on Azure App Service

[Node.js] [TypeScript] [PostgreSQL] [Azure] [Docker] [React] [MercadoPago]

- ▶ 4-layer tenant isolation: hostname detection → cross-validated JWT → active session destruction on mismatch → tenant_id filtering on every DB query.
- ▶ Custom security implementation from scratch: X-Frame-Options, distributed rate limiting, and input sanitization — zero third-party security packages.
- ▶ Self-validating PostgreSQL schema: 70+ tables, 20+ PL/pgSQL functions and 10+ triggers enforcing ACID compliance at DB level.
- ▶ Credit risk scoring engine: evaluates client tenure, purchase frequency, historical max ticket, and overdue payments to generate automated LOW/MEDIUM/HIGH recommendations.
- ▶ Immutable forensic audit trail: append-only Kardex (SELECT FOR UPDATE + atomic transactions) and JSONB diff-tracking — neither table permits UPDATE or DELETE.
- ▶ FIFO + Priority Override inventory algorithm: VIP orders preempt queue with cascade notifications. Smart Reordering normalizes quantities to supplier packaging via $\text{ceil}(\text{qty}/\text{pack}) \times \text{pack}$.
- ▶ Enterprise RBAC: 7 roles mapped to real business functions (Finance, Inventory, Purchasing, Sales Agents, Catalog, Administrators, Super Administrators) with granular module-level permission matrix.
- ▶ End-to-end automation: daily debt aging, automatic client suspension after 15-day overdue window, low-stock alerts, and backorder-triggered purchase order generation.

Creator & Developer · **Apex-Finance** Feb 2026 – Present

Personal project — Budget & expense tracking

[TypeScript] [React] [PostgreSQL]

- ▶ Implemented double-entry accounting logic with real-time dashboards for multi-category financial control and visual spending breakdowns.

Co-Creator & Mobile Developer · **DevPal** Jan 2026

Google Gemini Hackathon

[Google Gemini API] [Mobile] [Real-time Code Execution]

- ▶ Built developer-experience app: interactive event map, AI-generated coding challenges with live execution, AI code review, and a gamified XP + leaderboard system.

COMPETITIONS & HACKATHONS

Google Gemini Hackathon — DevPal 2026

NASA Space Apps Challenge 2025

Major League Hacking (MLH) 2025 & 2026

EDUCATION

B.Eng. in Software Engineering · Universidad Autónoma de Querétaro (UAQ) 2022 – Present

6th Semester · Querétaro, México

LANGUAGES

Spanish — Native · English — C1
